Statistics Describing the Population with Disabilities in Indiana:
By County and CIL Catchment Area

Prepared by

Andrew J. Houtenville, Ph.D., and Tony Ruiz, Ph.D.
University of New Hampshire
Institute on Disability

and

Carol Baker, David Nelson, and Patricia Stewart
Indiana Council on Independent Living (ICOIL)

With support from the
Hunter College Rehabilitation and Training Center on
Disability Statistics and Demographics (StatsRRTC)

February 2011

The StatsRRTC is funded to Hunter College by the U.S. Department of Education, National Institute on Disability and Rehabilitation Research (NIDRR, Grant No. H133B080012). The contents of this report do not necessarily represent the policy of the Department of Education, and you should not assume endorsement by the Federal Government (Edgar, 75.620 (b)).

List of Tables

- Table 1. Number and percentage of civilians (living in the community) with disabilities, by county and CIL, in 2008
- Table 2. Number Supplemental Security Income participants, by county and CIL, in 2008
- Table 3. Number Social Security Disability Insurance beneficiaries, by county and CIL, in 2008
- Table 4. Number and percentage of civilians ages 5-17 (living in the community) with disabilities, by county and CIL, in 2008
- Table 5. Number and percentage of civilians ages 18-34 (living in the community) with disabilities, by county and CIL, in 2008
- Table 6. Number and percentage of civilians ages 35-64 (living in the community) with disabilities, by county and CIL, in 2008
- Table 7. Number and percentage of civilians ages 65-74 (living in the community) with disabilities, by county and CIL, in 2008
- Table 8. Number and percentage of civilians ages 75 and older (living in the community) with disabilities, by county and CIL, in 2008
- Table 9. Number and percentage of civilians (living in the community) with hearing difficulty, by county and CIL, in 2008
- Table 10. Number and percentage of civilians (living in the community) with vision difficulty, by county and CIL, in 2008
- Table 11. Number and percentage of civilians ages five and older (living in the community) with cognitive difficulty, by county and CIL, in 2008
- Table 12. Number and percentage of civilians ages five and older (living in the community) with ambulatory difficulty, by county and CIL, in 2008
- Table 13. Number and percentage of civilians ages five and older (living in the community) with self-care difficulty, by county and CIL, in 2008
- Table 14. Number and percentage of civilians ages 18 and older (living in the community) with independent living difficulty, by county and CIL, in 2008
- Table 15. Employment rate of civilians ages 18-64 (living in the community), by disability status, county and CIL, in 2008
- Table 16. Poverty rate of civilians ages 18-64 (living in the community), by disability status, county and CIL, in 2008
- Table 17. Percentage of households receiving Food Stamps, by disability status, county and CIL, in 2008

Introduction

Accurate and reliable statistics are a powerful tool—in research, policymaking, program evaluation, and advocacy. Statistics are used to frame the issues, monitor current circumstances and progress, judge the effectiveness of policies and programs, make projections about the future, and predict the costs of potential policy changes. The estimation of accurate and reliable statistics depends on the collection of accurate and reliable data.

This report provides statistics on the population with disabilities in Indiana, in each county within Indiana, and for the catchment area of each Center for Independent Living (CIL). Topics include population size, age, disability type, employment, poverty, and participation in the Social Security Administration (SSA) disability programs.

In the next sections, this report discusses the data sources, methods for generating county-level and catchment area statistics, layout of the tables, and the results. A glossary is provided to define important terms. The results section highlights comparisons of the CIL catchment areas. There are many other results and patterns that are not discussed—it is simply not feasible to discuss every possible pattern in the context of this report. For instance, one could analyze county-level patterns within each CILs catchment area.

Data Sources

There are very few sources of local-level statistics on the population with disabilities. The Census Bureau generates county-level disability statistics using its American Community Survey (ACS), which is conducted annually. To generate statistics for counties with small populations, the Census Bureau must pool together data from multiple years. Indeed, the disability statistics presented in this report are based on the 2008 public-release ACS data file

available on the Census Bureau's Data Ferret On-line system. A major shortcoming of using the public-release file is that data on individuals living in institutions are not available.

Another source of disability-related data on people with disabilities is SSA, which publishes county-level statistics on the number of disability-related beneficiaries for the Supplemental Security Income (SSI) program and the Disability Insurance (DI) program. Unfortunately, SSA does not publish the number of persons that are in both programs (i.e., concurrent beneficiaries), therefore adding together the disability-related SSI and DI beneficiaries would double count some individuals.

Lastly, the Census Bureau's Population Estimate Program provides the official population estimates for the United States. These estimates are provided in Table 1.

Methods

County-Level ACS Estimates. The 2008 ACS data is a raw data set containing the survey responses of individuals. These data are used to generate statistics for different sub-groups, like individuals living in Indiana. However, the data does not contain a variable indicating the county an individual lives in, because some counties are so small, that it would be feasible to identify an individual. Instead, the Census Bureau groups people into Public-Use Microdata Areas (PUMAs), where each PUMA contains at least 100,000 individuals, thereby the Census Bureau is protecting the anonymity of individuals that participate in the survey. The Census Bureau leaves it up to the states to define PUMAs, and PUMA boundaries do not necessarily coincide with county boundaries. Indiana has 48 PUMAs and 92 counties, so some of the PUMAs will cover portions of more than one county.

In order to produce county-level estimates of the population with disabilities, one must assign the disability populations of the PUMAs to the counties. When a PUMA fits entirely

within a county, that PUMA's total number of people with disabilities is simply added to the county's total number of people with disabilities. For instance in Indiana, PUMA 201 fits entirely within Lake County, so the number of people with disabilities in PUMA 201's is included in Lake County's total number of people with disabilities. When a PUMA runs over county borders and is split between more than one county, each county receives a portion of the PUMA's total number of people with disabilities. For instance, PUMA 800 is split between four counties: De Kalb, Lagrange, Noble, and Steuben. As a result, the 2008 ACS population for PUMA 800's was assigned to these four counties based on the proportion of the 2000 Census total population that were in each county: 26.0 percent of PUMA 800's population was in De Kalb county, 22.6 percent in Lagrange county, 29.9 percent in Noble county, and 21.5 percent in Steuben county.

It is important to recognize that this approach assumes that the distribution of people with disabilities within a PUMA is the same as the distribution of all people in 2000 Census within that PUMA. In addition, this method assumes that people with disabilities in 2008 are distributed in the same fashion as people without disabilities. This assumption may not be entirely true, but it is the most straightforward method to estimate county-level disability statistics. This is also a reason for looking at SSDI and SSI beneficiary statistics, which are not sample estimates, but statistics generated from administrative records.

This approach is used to estimate the populations for each subgroup in the tables below; e.g., the number of people with disabilities that are below the poverty level in each PUMA are allotted to their respective county(ies) using the same method. County-level rates and percentages were then calculated based on subgroup counts; e.g., the poverty rate for people with disabilities in a given county is the number of people with disabilities that are below the poverty

line in that county divided by the number of people with any disability(ies) in that county, multiplied by 100.

CIL Catchment-Level Estimates. At the beginning of this project, a list of CILs was provided along with the counties that each of them covers. A CIL's population is based on the summation of all counties in its catchment area. This approach is used to estimate the populations for each subgroup in the tables below. Rates and percentages were then calculated based on subgroup counts.

Population Size and Prevalence

The Indiana Council on Independent Living (ICOIL) has divided the state into thirteen areas, eight of these areas have existing Centers on Independent Living (CILs), and the remaining five areas will be having CILs in the future. For this report the future areas are designated with numbers one through five and the name of city where the new center will be located.

Indiana has a population of 6,271,184 of which 12.6 percent, or 791,204, are civilians with disabilities. This is slightly higher than the national percentage of 12.1 percent.

Indianapolis/Marion County and the surrounding counties, served by accessABILITY, is the most populated area in the state and ties with the Fort Wayne area, served by the League, for the lowest percentage of civilians with disabilities, both having 10.8 percent.

The least populated area is Versailles (Region #5-southwest). Most interesting is the Terre Haute area, served by the Will Center, with 17.2 percent of its population with disabilities, the highest percentage in the state.

To further help identify who and where these people are the second table looks at the numbers of people receiving Social Security Income. There are four categories given: blind and

disabled, less than 18, ages 18-64, and ages 65 or older. accessABILITY's area (Indianapolis) has the largest number in all categories. However the lowest numbers are as follows:

- Blind and Disabled – Logansport area (Region #2 Rural North),
- Under 18 – Versailles area (Region #5 Southeast)
- 18-64 – Versailles area (Region #5 Southeast)
- 65 or older – Logansport (Region #2 Rural North)

When we use the Social Security Disability Insurances beneficiary's numbers we can see the number of Disabled workers, spouses, and children.

- Highest number of Disabled workers- accessABILITY (Indianapolis area)
- Highest number of Spouses - Everybody Counts (Merrillville area)
- Highest number of Children – accessABILITY (Indianapolis area)
- Lowest number of Disabled workers – Logansport area (Region #2 Rural North)
- Lowest number of Spouses – Lafayette area (Region #3 Central West)
- Lowest number of Children – ATTIC (Vincennes area)

Age and Disability

There is a well-known association of disability and aging. In general, the prevalence of disability rises with age. And age affects the types of independent living services that individuals may need. Tables 4, 5, 6, 7, and, 8, break the population with disabilities into five age groups: age 5-7, ages 18-34, ages 35-64, ages 65-74 and ages 75 and over. Indiana had a larger proportion of people with disabilities in all age groups, with the exception of the group 75 and older. For all existing CIL and planned CIL catchment areas, individuals ages 65 and older are proportionally the largest age group. The highest and lowest proportion of people with

disabilities in each age group as identified within the catchment areas of existing CIL and planned CIL is as follows:

- Region #1 North Central had the highest proportion of young people ages 5-17 (7.9 percent) and Region #5 Southeast had the lowest proportion (4.1 percent), as compared to the statewide percent of 5.8 percent and the national percent of 5.2 percent.
- ILCIN had the highest proportion of adults ages 18-34 (9.6 percent) and Region #3 Central West had the lowest proportion (3.7 percent), as compared to the statewide percent of 6.5 percent and the national percent of 5.6 percent.
- Will Center had the highest proportion of adults ages 35-64 (19.7 percent) and the League had the lowest proportion (11.3 percent), as compared to the statewide percent of 13.5 percent and the national percent of 12.7 percent.
- Will Center had the highest proportion of adults ages 65-74 (33.4 percent) and the League had the lowest proportion (20.4 percent), as compared to the statewide percent of 27.3 percent and the national percent of 26.5 percent.
- Will Center had the highest proportion of adults ages 75 and older (56.1 percent) and Region #2 Rural North had the lowest proportion (46.5 percent), as compared to the statewide percent of 50.6 percent and the national percent of 51.4 percent.

Disability Type

Tables 9 through 14 represent the different disability types and compare the State of Indiana figures with National size and percentages for each type. It should be noted that we are using a high-low comparison of percentages. We also include the population size. Percentages take a more holistic look at the area thus when comparing rural to urban take into consideration the greater number of opportunities to access additional service providers and opportunities in urban areas that may not exist in rural areas. When planning and distributing resources both percentages as well as absolute numbers (population size) need to be considered.

- **Hearing Difficulty.** In the US, 3.5 percent (10,361,934 persons) report hearing difficulty.

A slightly higher percentage of persons in Indian report hearing difficult—3.7 percent

(234,187 persons). ILCEIN with 5.2 percent (10,802 persons) has the highest percentage of persons reporting hearing difficulty, while accessABILITY is the lowest at 3.0 percent (49,175 persons).

- **Vision Difficulty.** The national percentage of persons living in communities reporting vision difficulty is 2.3 percent versus the Indiana average of 2.2 percent. The Will Center has the highest percentage with 3.1 percent (6,679 persons), while The League has the lowest percentage at 1.7 percent (12,084 persons).
- **Cognitive Disability.** Indiana is slightly higher in this category with 5.1 percent (297,881 persons) versus the US average of 4.8 percent (13,425,171 persons) who are 5 years of age and older. It is noteworthy to actual Centers and Regional averages that indicate eight out of 13 Centers/proposed areas have greater than the national and state averages. The Will Center at 8.0 percent (16,276 persons) has the highest percentage, and the Versailles catchment area has the lowest with 4.2 percent (6,952 persons).
- **Ambulatory Difficulty.** The US average for ambulatory difficulty of persons age 5 and older is 6.9 percent with Indiana only 0.1 percentage points higher at 7.0 percent. Again it is noteworthy that ten of the 13 Centers or Regions are higher than the state and national averages. ILCEIN with 9.0 percent tied with The Will Center at 9.0 percent as the highest, and the lowest is The League with 5.8 percent.
- **Self-Care Difficulty.** This category represents persons five years old and older living in a community who report self-care difficulty. The US percentage is 2.6 percent (7,203,018 persons), compared to 2.5 percent (146,162) in Indiana. Review of the regions and centers show half of them are above both averages. The Will Center at 3.5 percent (7,201

persons) is the highest, and the lowest is Central West (Lafayette) with 1.8 percent (4,843 persons).

- **Independent Living Difficulty.** This category represents persons 18 years of age and older who have difficulty living independently. This category is very informative to the development of new centers in the un-served areas. At the national level 5.7 percent (12,915,318 persons) report independent living difficulty. Similarly, in Indiana 5.7 percent (267,304 persons) report independent living difficulty. The percentage reporting independent living difficulty for the Will Center is the highest at 7.7 percent (12,810 persons) and lowest for the Central West (Lafayette) with 4.4 percent (9,625 persons).

Economic Outcomes

Employment. Table 15 focuses on working-age individuals from ages 18 to 64. The table provides the employment rates of people with and without disabilities. The employment rate of civilians with disabilities in the US is 39.1 percent, compared to 38.5 percent in Indiana. The employment rate of civilians without disabilities in the US is 77.7 percent, compared to 78.6 percent in Indiana. The table also reports the employment gap—the percentage point difference between the employment rate of people with disabilities and the employment rate of people with disabilities. In reviewing our current list of existing centers and our new five areas we see that The Will Center located in Terra Haute has the largest employment gap—48.5 percentage points. Among the new areas, the Ohio River South are has the highest employment gap—42.9 percentage points.

Poverty. Table 16 illustrates the poverty rate of consumers ages 18-64 (living in the community) by disability, status, county and CIL. In the United States the poverty gap is 15.1 percent and in Indiana it's slightly higher at 16.0 percent. In reviewing the poverty gap for all of

our Centers there are three Centers that are in the range of 19.0 to 19.5 percent for the poverty gap. Two of these Centers are in rural areas and the third one is located in Fort Wayne, IN.

Food Stamps. Table 17 covers the percentage of households that receive Food Stamps by disability, status, county and CIL. This information is based on all households with at least one person with a disability and the households without a person with a disability. In the United States the percentage is 13.9 percent and in Indiana the percentage is slightly higher at 15.4 percent. Of the existing Centers the ones that are located in the most rural areas of the state are the ones who experience the highest percentage of individuals who receive food stamps.

Remarks about Proposed Centers

Some of the most significant findings of this study relate to the large geographic areas of the state and the total number of people with disabilities in Indiana that have no access to CIL services. Thirty-five of Indiana's 92 counties (or 38%) are currently not served by a CIL, and 232,323 people with disabilities (or 29.4% of the state's total population of people with disabilities) who live in these counties have no access to CIL services. In addition, 28 of the 35 unserved counties are in rural areas that typically lack other types of disability related service providers. Indiana faces a significant challenge as to how it will work to improve conditions for its citizens with disabilities, but it will take a particularly strong effort to make sure that those in unserved areas of the state begin to have access to the CIL services that are already available to their peers in other regions of the state.

Concluding Remarks

This report sheds some light on the size, composition and social participation of the population with disabilities within Indiana, the catchment areas of the eight existing Indiana

Center for Independent Living (CIL), and the five areas of the state that have been targeted for a new CIL.

Data provided in this report shows that Indiana has a higher proportion of people with disabilities than found in the United States as a whole. Indiana also has a higher proportion of people with disabilities ages 5 through 17, ages 8 through 34, ages 35 through 64, and ages 65 through 74. Further, as compared to national data, Indiana has a higher rate of people who have difficulty with hearing, cognitive function, and ambulation. There is also a lower employment rate and a higher poverty rate among Hoosiers with disabilities, as compared to national prevalence rates.

The compositions of the CIL populations served by existing CILs differ widely, such that no two CIL populations are the same. However, while there is a wide variance in findings related to unemployment and poverty levels among people with disabilities in the service areas of existing CILs, people with disabilities in Indiana are unemployed and live in poverty at a much higher rate than those without disabilities. In fact, those with disabilities are more than 2 ½ times more likely to live in poverty than those without disabilities, more than 3 and a half times more likely to receive food stamps, and are employed at only half the rate as those without disabilities.

As mentioned, the most significant findings of this study relate to the large geographic areas of the state and the total number of people with disabilities in Indiana that have no access to CIL services. Thirty-five of Indiana's 92 counties (or 38 percent) are currently not served by a CIL, and 232,323 people with disabilities (or 29.4 percent of the state's total population of people with disabilities) who live in these counties have no access to CIL services. In addition, 28 of the 35 unserved counties are in rural areas that typically lack other types of disability

related service providers. Indiana faces a significant challenge as to how it will work to improve conditions for its citizens with disabilities, but it will take a particularly strong effort to make sure that those in unserved areas of the state begin to have access to the CIL services that are already available to their peers in other regions of the state.

Glossary

Ambulatory Disability (ACS): In the ACS, individuals five or more years old who responded “yes” when asked if they had “serious difficulty walking or climbing stairs.”

American Community Survey (ACS): The American Community Survey is a large, continuous demographic survey conducted by the U.S. Census Bureau that will provide accurate and up-to-date profiles of America's communities every year. Annual and multi-year estimates of population and housing data are generated for small areas, including tracts and population subgroups. This information is collected by mailing questionnaires to a sample of addresses.

Civilian: A person not in active-duty military.

Cognitive Disability (ACS): In the ACS, individuals who indicated “yes” when asked if due to a physical, mental, or emotional condition, they had “serious difficulty concentrating, remembering, or making decisions.”

Disability Insurance (DI): The Social Security Administration’s Old-Age, Survivors, and Disability Insurance (OASDI) program provides monthly benefits to qualified retired and disabled workers, their dependents and to survivors of insured workers. Eligibility and benefit amounts are determined by the worker's contributions to Social Security.

Disability Status (ACS): The U.S. Census Bureau used six questions (very similar to the six questions in the CPS stated above) to identify persons with disabilities. A response of “yes” to any one of the questions indicates that the person in question has a disability. However, the cognitive, ambulatory, self-care, and independent living related questions are not used to identify disability in individuals less than 5 years old, and the independent living related question is not used to identify disability in individuals less than 18 years old.

Employment Status: In the American Community Survey, individuals were asked a series of questions designed to identify their status. Based on the answers, individuals were classified into one of five groups: (1) people who worked at any time during the reference week; (2) people on temporary layoff who were available for work; (3) people who did not work during the reference week but who had jobs or businesses from which they were temporarily absent (excluding layoff); (4) people who did not work during the reference week, but who were looking for work during the last four weeks and were available for work during the reference week; and (5) people not in the labor force. The employment status data shown in American Community Survey tabulations relate to people 16 or more years old.

Hearing Disability (ACS): In the ACS, individuals who indicated “yes” when asked if they were “deaf or ... [had] serious difficulty hearing.”

Income: The sum of all wages, salary, commissions, bonuses, and tips; self-employment income from own nonfarm and farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, and income from estates and trusts; Social Security and Railroad Retirement income; Supplemental Security Income (SSI); any public assistance and

welfare payments from the state and local welfare office; retirement, survivor, and disability pensions; and any other sources received regularly such as Veterans' (VA) payments, unemployment compensation, child support, and alimony.

Independent Living Disability (ACS): In the ACS, individuals who indicated “yes” when asked if, due to a physical, mental, or emotional condition, they had difficulty “doing errands alone such as visiting a doctor’s office or shopping.”

Poverty: The Office of Management and Budget in Statistical Policy Directive 14 sets the standards for which poverty is calculated. The U.S. Census Bureau uses a set of dollar value thresholds that vary by family size and composition to determine who is in poverty. If a family’s total income is less than the dollar value of the appropriate threshold, then that family and every individual in it are considered to be in poverty.

Resident Population: All residents (both civilian and Armed Forces) living in the United States (all 50 states and the District of Columbia).

Self-Care Disability (ACS): In the ACS, individuals five or more years old who responded “yes” when asked if they had “serious difficulty dressing or bathing.”

Supplemental Security Income (SSI): The Social Security Administration pays benefits to disabled adults and children who have limited income and resources. SSI benefits also are payable to people 65 and older without disabilities who meet the financial limits.

Vision Disability (ACS): In the ACS, individuals who indicated “yes” when asked if they were “blind or ... [had] serious difficulty seeing even when wearing glasses.”

Existing Centers for Independent Living Identifying New Catchment Areas

Dollar figures indicate amount that a particular county would receive to provide independent living services.

Numbers in blue indicate the number of disabled individuals who reside in that county. Data from 2008 American Community Survey (ACS) aggregated from PUMA-level estimates using Census 2000 PUMA-to-county weighting factors.
